

Thermal Imaging Leak Detection Services

Non-invasive technique to trace leaks

Safe

Professionals

Precise

Non-Invasive

Pairing expert training with the latest in leak detection technology, **Toscano Plumbing delivers a level of service you simply don't expect from your plumber.** We're proud to offer thermal imaging leak detection as a specialist service.

How it works

Not all leaks are visible. But Toscano Plumbing's expertly-trained team and thermal imaging technology make leaks easier to find.

This method of leak detection uses an infrared device that allows our plumbers to measure and detect the changes in the surface temperature of the area under investigation.

We can use our thermal imaging camera and scan in, under, and around the plumbing to determine if there is an active leak. This provides an efficient and non-intrusive way of locating leaks from water pipes that are hidden behind walls, under concrete slabs and other surfaces, and in ceilings.

Thermal imaging pinpoints the leak and determines the extent of the damage.

Thermal imaging detects these problems:

- Damaged pipes in walls and ceilings
- Roof leaks
- Leaking balcony
- Leaking pools and spas
- Locating dampness in walls and floors
- Leaking shower bases and bath seals
- Leaks through windows and doors
- Failed waterproofing membranes
- Floor heating problems
- Insulation issues in walls and ceiling
- Testing solar hot water panels

How this helps you

- An immediate solution protects your property and people from potential electrical issues and structural damage
- Non-invasive detection techniques mean there is no extensive digging or damaging just to locate the leak
- Locate internal pipes without the need for building schematics
- Efficiently find leaks to save you time and money
- Detects dampness, water damage and even the risk of damp to keep you informed and protect your property
- Checkup ensures you don't have any hidden leaks for peace of mind
- Minimal disruption, so it's 'business as usual'

Why choose us?

Toscano Plumbing is a family-owned and operated business, with highly-skilled plumbers and over 60 years' experience.

- We never use subcontractors
- Plumbers connected and online for 24/7 service
- 100% 'clean up our mess' policy
- Strict health and safety policies
- Latest plumbing technologies
- Same-day service, diagnostic testing and pricing discussed upfront
- Rapid response and resolution
